# Mobile Friendly Lookup Tool

# Online Code Builder

## Online Code Builder

Build a diagnosis and intervention code set following the six steps of the nursing process recommended by the ANA (1991): Assessment, Diagnosis, Outcome Identification, Planning, Implementation and Evaluation.

Each step will appear on each screen. Choose a selection from the table to advance to the next step in the nursing process. As you advance your diagnosis and intervention codes will be built and appear in the box below, replacing the question marks which serve as placeholders.

### Step 1. Assessment: Select a Component

?????

Letter	Concept	Definition
A	Activity	Cluster of elements that involve the use of energy in carrying out musculoskeletal and bodily actions.
B	Bowel/Gastric	Cluster of elements that involve the gastrointestinal system.
C	Cardiac	Cluster of elements that involve the heart and blood vessels.
D	Cognitive/Neuro	Cluster of elements that involve the cognitive, mental, cerebral, and neurological processes.
E	Coping	Cluster of elements that involve the ability to deal with responsibilities, problems, or difficulties.
F	Fluid Volume	Cluster of elements that involve liquid consumption.
G	Health Behavioral	Cluster of elements that involve actions to sustain, maintain, or regain health.
